

The printing principle of the Flexo Label printing machine is to transfer the ink from the high precision anilox roller to plate. Then from the plate to the printing material. It can make stable and high speed printing on cloths, ribbon and paper rolls with the printed result of thick and solid ink layer and good fastness. The plate cylinder of different circumferences can be replaced, so that to change the printing length. The machine equipped with two sides printing tension control mechanism, make it more accurate.
