

High Speed Rotary Label Printing Press

This series machine is a classical product among garment label printing machine. With resin plate being used in the machine and by means of offsets process, it can complete stable, accurate, multi-color and two-sides printing on different fabric and paper tapematerials at high speed. The printing quality of the machine is not affected by the tension of materials and the printed small characters look clear and complete and the registration is precise. They are the first choice of tag/label printing in garment , toy, gloves, trunks and briefcases industries.

- Two sides printing can be complete at the same time
- Two plate cylinders with different circumference of 295mm or 400 are for customer's choice
- Different link distributing system, more uniform and quiker ink distribution
- The ne shower self-lubricating ensures the driving parts longer life and lower noise
- The XHHA 100 infrared label drying machine is optional for matching with this machine
