

This machine adopts platen die-cutting structure, roll drawing computer servo system and photoelectric eye for label positioning on the sides before being die-cut. Controlled by the computer, the machine completes feeding, die-cutting, stripping, or rewinding in one cycle. Applicable for die-cutting self-adhesive paper, polyester film and various anti-fake labels, the machine is the best ideal fitting equipment for rotary, flexo and screen label printing machines as well as gravure printing machine in label printing industry. It is also suitable to electronic and glue tape industries.
